

IQ Assessment

How IQ ASSESSMENT will benefit you?

Determining if a child is gifted or has special needs can give parents a valuable insight into their child's emotional, academic and social development – this children's IQ test can be immensely helpful in determining if your child has special needs or is eligible for higher placement in school. Research has shown that one of the first steps to raising a gifted child is to have him or her take an IQ test along with other forms of testing to determine his or her strengths, weaknesses and abilities.

In today's crowded educational environment, parents cannot rely solely on their child's school to determine if their child is gifted or would benefit from being placed in a special academic environment. Parents should take the initiative as early as possible by having their children take an intelligence test.

IQ Assessment is not only for gifted child but also for every child and adult who wants to know his or her present level of intelligence, strengths and weakness to work upon it and reach their set goal in a planned manner.

Who should take IQ ASSESSMENT?

IQ Assessment can be taken at any stage above 3 years Child to 90 years Adult. Each age group are analysed on different Wechsler scales for the accurate result.

We use the world's leading IQ tests i.e The Wechsler Preschool and Primary Scale of Intelligence (WPPSI) for 2 years 6 months to 7 years 7 months children, the WISC-IV (Wechsler Intelligence Scale for Children) for children ages 6 and up and the Wechsler Adult Intelligence Scale (WAIS individuals aged 16–90 years which gives a detailed report on the below areas:

- ✓ Comprehension
- ✓ Memory
- ✓ Reasoning Abilities
- ✓ Vocabulary
- ✓ Speed
- ✓ Decision Making Skills
- ✓ Numerical Skills
- ✓ Concentration
- ✓ Visual Motor Co-ordination
